**Bacteriological Monitoring and Reporting
Requirements Not Met for
CSP Limekiln
Water System No. 2710306**

Our water system failed to monitor as required for drinking water standards during September 2013 and, therefore, was in violation of the state drinking water regulations. Even though this failure was not an emergency, as our customers, you have a right to know what you should do, what happened, and what we did to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the month of September 2013, the CSP Limekiln water system failed to collect one of two distribution samples for coliform bacteria analysis testing and therefore, cannot be sure of the quality of our drinking water within that sampling area during that time.

What should I do?

- There is nothing you need to do at this time.
- The table below lists the contaminant(s) we did not properly test for during the last year, how many samples we are required to take and how often, how many samples we took, when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

<i>Contaminant</i>	<i>Required Sampling Frequency</i>	<i>Number of Samples Taken</i>	<i>When All Samples Should Have Been Taken</i>	<i>When Samples Were or Will Be Taken</i>
Coliform	Two samples every month	1	Two samples each during September 2013	Two distribution samples were collected during October 2013 & are scheduled monthly thereafter
