

InOMN

International Observe the Moon Night

Saturday, September 22

**Come to the Anza-Borrego Desert State Park Visitor Center
and
Celebrate our Nearest Celestial Neighbor!**

1:40 pm Moon Rise/What do You See in the Moon?

Some see a Man-in-the-Moon, others a bunny or a frog! Assuming the skies cooperate, we'll watch for the moon to come up together, and talk about some of the features that are visible to the naked eye or through binoculars and telescope. Meet on the Roof or the Patio, depending on the weather.

3:00 pm Why does the Moon Change Shape?

Learn about the moon's phases and what makes the moon appear to change shape from night to night. Meet State Park Interpreter Sally Theriault on the Patio if the weather's nice; if it's too hot we'll gather in the Discovery Lab.

Telescope will be set up for Viewing of the Moon 6-8 pm
(Nierenberg Plaza, weather permitting)
