PROJECT TITLE: Restoration of a Hill Climb at Opal Peak.

LOCATION: Red Rock Canyon State Park

COUNTY: Kern

DESCRIPTION OF THE NATURE AND PURPOSE OF PROJECT:

This project is to stabilize, remove and restore a hill climb at Opal Peak by controlling the water volume and velocity within the trail tread. A series of erosion-control measures will be implemented over the length of the trail to pull water off the abandoned and eroding trail tread. This project will also include the removal of the primitive route that leads to the hill climb. The removal, closure and restoration of the hill climb, along with the removal, closure and restoration of the primitive route will not limit or reduce connectivity to any other primitive routes within the Park. Weed-free erosion control blankets and/or other erosion materials will be used to help stabilize the area. Vertical mulching will be used to reduce visual impacts of the project area. A peeler post fence will be installed below the project area.

DPR-approved standard project requirements have been incorporated into this project. A copy of these requirements may be obtained by submitting a request to the project Environmental Coordinator listed below.
